## DO NOT ENTERNOMERATS TO THE CLAIMS:

/H.P./ 02/17/2009

This listing of claims will replace all prior versions, and listings, of claims in the application:

## LISTING OF CLAIMS:

- 1. (previously presented) A process for the preparation of whole tomatoes extracts with lycopene content from 5% to 20% and with reducing sugars content expressed as glucose lower than 1%, comprising the following steps:
  - a) pretreating fresh tomatoes, which comprises washing, then cutting or crushing;
  - b) heat concentrating of the cut or crushed tomato from step a);
  - c) extracting the concentrate from step b) with watersaturated ethyl acetate;
  - d) backwashing the extract from step c) with water; and
  - e) concentrating the extract to dryness under reduced pressure.
- 2. (previously presented) A process as claimed in claim 1, wherein the concentration of the extract according to step e) is carried out to a final volume ranging from 0.10 to 0.28% with respect to the starting volume, further comprising the following steps:

Docket No. 2503-1113 Appln. No. 10/509,062

- f) filtering and drying lycopene precipitated from the concentrate; and optionally suspending lycopene in ethanol or ethyl acetate, then filtering and washing with ethyl acetate until obtaining the desired purity; and
- g) adding seed oil to the lycopene from step f).
- 3. (original) A process as claimed in claim 2, wherein the seed oil is tomato seed oil.
- 4. (original) A process as claimed in claim 2, wherein the seed oil is soybean oil.
- - 0.28 4.46% reducing sugars,
  - 12.97 16.1% phospholipids, and
  - 14.47 24.02% mono-di-glycerides.
  - 6-8. (canceled)
- 9. (previously presented) A process as claimed in claim 1, wherein the heat concentrating of step b) is carried out at

Docket No. 2503-1113 Appln. No. 10/509,062

 $40^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ , so that a weight of the cut or crushed tomatoes will be 20-30% of a starting value.

- 10. (previously presented) A process as claimed in claim 1, wherein the heat concentrating of step b) is carried out at  $50^{\circ}$ C, so that a weight of the cut or crushed tomatoes will be 20-30% of a starting value.
- 11. (previously presented) A process as claimed in claim 1, wherein the heat concentrating of step b) is carried out under reduced pressure.
- 12. (previously presented) A process as claimed in claim 11, wherein the reduced pressure is 20 mBar.
- 13. (previously presented) A process as claimed in claim 1, wherein the extracting the concentrate step c) is repeatedly performed with the water-saturated ethyl acetate at a volume ranging from 1.0 to 2.5 times a weight of the concentrate.
- 14. (previously presented) A process as claimed in claim 1, wherein the extracting the concentrate step c) is repeatedly performed with the water-saturated ethyl acetate at a volume of 2 times a weight of the concentrate.

Docket No. 2503-1113 Appln. No. 10/509,062

- 15. (previously presented) A process as claimed in claim 1, wherein the extracting the concentrate step c) is carried out for at least an hour at room temperature shielded from light.
- 16. (previously presented) A process as claimed in claim 1, wherein the backwashing step d) is carried out with the water having half a volume of the water-saturated ethyl acetate of step c).
- 17. (previously presented) A process as claimed in claim 1, wherein in step e) the extract is concentrated to a final volume ranging from 0.10% to 0.28% with respect to a starting volume.
